## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

from appeal, if required, is respectfully requested. Please amend the above-identified patent application as follows:

**IN THE CLAIMS:**

Please substitute for corresponding pending claims the claims as shown rewritten below with amendments effected therein. Appendix I is attached hereto having marked versions of said claims with amendments indicated by brackets and underlining.

---

1. (Twice amended) A game system which allows users to play a common game in which at least one game element possessed by each of the users, among game elements expected to be used in the common game, is capable of being transacted between the users in the common game, the game system comprising:

21  
at least two game machines each possessed by each of the users and communicative with one another in a manner permitting data exchange therebetween, each of the at least two game machines comprising:

a possession information storage device for storing possession information for identifying a possession state of the game elements concerning each of the users of each of said at least two game machines;

a discrimination device for discriminating a first game machine representative of a side which delivers a particular game element of the game

elements and a second game machine of a side which receives the particular game element, from said at least two game machines;

a transaction information providing device for providing transaction information for discriminating game elements acquirable to a user of the second game machine from game elements possessed by a user of the first game machine, to the second game machine, based on the possession information corresponding to the user of the first game machine;

a presentation device for presenting the acquirable game elements to the user of the second game machine via a display device of the second game machine, based on the transaction information;

a transaction subject selection device for selecting at least one game element to be actually acquired by the user of the second game machine, from the acquirable game elements in response to a predetermined selection and decision operation on an input device of the second game machine;

an information update device for updating the possession information so as to add the selected game element to game elements possessed by the user operating the second game machine, in response to the selection of the game element conducted by the transaction subject selection device;

an operation information providing device for providing operation information for identifying a situation of the selection and decision operation from the second game machine to the first game machine; and

1  
B  
Cont.

R<sup>1</sup>  
concl

a selection situation display device for displaying a situation of selection of the game element on a display device of the second game machine in response to the selection and decision operation, and displaying a situation of selection of the game element on a display device of the first game machine, based on the operation information in synchronization with the displaying of the situation of selection of the game element on the display device of the second game machine.

R<sup>2</sup>

5. (Twice amended) A game data exchange control method applied to a game system, the game system including game machines which allow users to play a common game by utilizing data exchange via a communication device, at least one game element possessed by a user of each game machine, among game elements expected to be used in the game, being made capable of being transacted between users in the common game, the game data exchange control method comprising the steps of:

producing possession information for identifying a possession state of the game elements concerning a user of each game machine;

discriminating a first game machine of a side which delivers the game element and a second game machine of a side which receives the game element, from the plurality of game machines;

providing transaction information for discriminating game elements acquirable to a user of the second game machine from game elements possessed by a user of the first game machine, to the second game machine, based on the possession information corresponding to the user of the first game machine;

presenting the acquirable game elements to the user of the second game machine via a display device of the second game machine, based on the transaction information;

selecting at least one game element to be actually acquired by the user of the second game machine, from the acquirable game elements in response to a predetermined selection and decision operation on an input device of the second game machine;

updating the possession information so as to add the selected game element to game elements possessed by the user operating the second game machine, in response to the selection of the game element;

providing operation information for identifying a situation of the selection and decision operation from the second game machine to the first game machine; and

displaying a situation of selection of the game element on a display device of the second game machine in response to the selection and decision operation, and synchronously displaying a situation of selection of the game element on a display device of the first game machine, based on the operation information.

6. (Twice amended) A game machine for allowing a user of the game machine to play a common game with another user of a different game machine by utilizing data exchange via a communication device, at least one game element possessed by each of users of the game machine and the different game machine, among game elements used in the game, being made capable of being transacted between the users in the common game, the game machine comprising:

B<sup>1</sup>  
a possession information storage device for storing possession information identifying a possession state of the game elements concerning the user of the game machine;

won't  
a discrimination device for recognizing the game machine as being one of a first game machine of a side which delivers the game element and a second game machine of a side which receives the game element, and recognizing the different machine as being a remaining one of said first and second game machines;

a transaction information providing device, responsive to recognition of the game machine as the first game machine, for providing transaction information for discriminating game elements acquirable to a user of the different game machine from game elements possessed by a user of the game machine, to the different game machine, based on the possession information;

a presentation device, responsive to recognition of the machine as the second game machine, for presenting the acquirable game elements to the user of the game machine via a display device of the game machine, based on the transaction

information for discriminating game elements acquirable to the user of the game machine provided by the different game machine;

2<sup>2</sup>  
p  
a transaction subject selection device, responsive to a predetermined selection and decision operation conducted on an input device of the game machine in response to the presentation of the game elements to the user of the game machine, for selecting at least one game element to be actually acquired by the user of the game machine, from the acquirable game elements, and providing selection result information identifying the selection result to the different game machine;

cont  
an information update device, responsive to selection of the game element conducted by the user of the game machine based on the transaction information provided by the different game machine, or responsive to provision of selection result information identifying the selection result of the game element from the different game machine in response to the provision of the transaction information to the different game machine, for updating the possession information, based on the selection result

an operation information providing device, responsive to recognition of the game machine as the second game machine, for providing operation information for identifying a situation of the selection and decision operation from the game machine to the different game machine; and

a selection situation display device responsive to recognition of the game machine as the second game machine, for displaying a situation of selection of the

game element on a display device of the game machine in response to the selection and decision operation, and, responsive to recognition of the game machine as the first game machine, for displaying a situation of selection of the game element on a display device of the game machine, based on the operation information in synchronization with the displaying of the situation of selection of the game element on the display device of the second game machine.

P  
can't.

7. (Twice amended) A computer readable storage medium having a program recorded thereon, the program allowing a user of a game machine to play a common game with another user of a different game machine by utilizing data exchange via a communication device, and the program making it possible to transact at least one game element possessed by each of users of the game machine and the different game machine, among game elements used in the game, between the users in the common game, the program being formed so as to make a computer included in the game machine perform the steps of:

storing possession information for identifying a possession state of the game elements concerning a user of the game machine;

recognizing the game machine as being one of a first game machine of a side which delivers the game element and a second game machine of a side which receives the game element, and recognizing the different machine as a remaining one of said first and second game machines;

responsive to recognition of the game machine as the first game machine, providing transaction information for discriminating game elements acquirable to a user of the different game machine from game elements possessed by a user of the game machine, to the different game machine, based on the possession information;

responsive to recognition of the game machine as the second game machine, presenting the acquirable game elements to the user of the game machine via a display device of the game machine, based on the transaction information for discriminating game elements acquirable to the user of the game machine provided by the different game machine;

responsive to a predetermined selection and decision operation conducted on an input device of the game machine in response to the presentation of the game elements to the user of the game machine, selecting at least one game element to be actually acquired by the user of the game machine, from the acquirable game elements, and providing selection result information identifying the selection result to the different game machine;

responsive to one of selection of the game element conducted by the user of the game machine based on the transaction information provided by the different game machine and to provision of selection result information identifying the selection result of the game element from the different game machine in response to the provision of the transaction information to the different game machine, updating the possession information, based on the selection result;

b<sup>2</sup>  
concl  
responsive to recognition of the game machine as the second game machine,  
providing operation information for identifying a situation of the selection and  
decision operation from the game machine to the different game machine; and

responsive to recognition of the game machine as the second game machine,  
displaying a situation of selection of the game element on a display device of the  
game machine in response to the selection and decision operation, and, responsive  
to recognition of the game machine as the first game machine, synchronously  
displaying a situation of selection of the game element on a display device of the  
game machine, based on the operation information.
